

Fast Track to ColdFusion 10

1. Course Overview

1. About the course
2. Course objectives
3. Course prerequisites
4. Course format

2. Getting Started with ColdFusion

1. Understanding dynamic web pages
2. Introducing ColdFusion
3. Exploring Dreamweaver CS6
4. Creating ColdFusion variables
5. Displaying variable values
6. Including files
7. Commenting Code
8. Implementing best practices

3. Publishing Database Content

1. Connecting to a Database
2. Querying a Database Table
3. Viewing Debug Data
4. Dumping a Recordset to a Browser
5. Displaying Database Data
6. Using the Dynamic Table Tool
7. Using the Resultset Structure Data
8. Using ColdFusion Functions
9. Implementing Best Practices

4. Building Forms with ColdFusion

1. Understanding HTML forms and form controls
2. Enabling debug output
3. Self-Posting forms
4. Determining form submission with IsDefined()
5. Evaluating form variables with cfparam
6. Introducing ColdFusion Forms
7. Implementing Best Practices

5. Building Search Interfaces

1. Using form data in dynamic queries
2. Preserving form data
3. Creating dynamic SQL for multiple search criteria
4. Using text searches
5. Using list searches
6. Implementing Best Practices

6. Building a Drill-Down Interface

1. Using Dynamic URL parameters
2. Creating a query string
3. Creating a data drill-down
4. Creating on-the-fly PDF documents
5. Displaying data in a tabbed interface
6. Implementing Best Practices

7. Inserting New Data

1. Building an Insert Interface
2. Building an Insert FORM Page
3. Using ColdFusion Validation
4. Using Client-side Validation
5. Using Server-side Validation
6. Creating Custom validation
7. Building Insert ACTION Logic

8. Updating Data

1. Building an Update FORM Page
2. Providing the primary key for update
3. Building Update Logic
4. Deleting records from the database

9. Reusing Templates

1. Reusing code
2. Using custom tags
3. Using user-defined functions
4. Finding UDFs
5. ColdFusion components
6. Finding CFCs

10. Securing an Application

1. Addressing the Web's Statelessness
2. Using the Application Framework
3. Using Application Events
4. Using Application Variables
5. Using Session Variables
