Docker Security

1. Container security
   - kernel namespaces
   - root capabilities
   - secure computing mode
   - linux security modules
2. Network security
   - Default and custom network encryption
   - Application isolation
3. Role Based Access Control
   - Discretionary access model
   - LDAP integration
   - Multitenancy isolation
4. Software Supply Chain
   - Known vulnerability audits
   - Identity signing
5. Introspection
   - Log streaming
   - Metric tracking
   - Auditing the Docker platform
