

Retail Merchandising System (RMS) Technical Essentials

15.0

Integration Overview

- Explain the Oracle Retail solution footprint
- Define Retail Merchandising System (RMS)
- Explain at a high level the integration of RMS with other applications

Functional Overview

- Describe application functionality
- Describe navigation

RMS Functional Overview

- Describe application functionality
- Describe navigation

Physical and Application Architecture

- Identify hardware and software requirements for Retail Merchandising System (RMS)
- Describe the RMS physical and application architecture

Installation

- Database installation tasks
- Batch installation tasks
- Application server installation tasks

Localization and Data Conversion

- Describe the process of localization
- Explain data conversion

Batch Processing

- The purpose of batch programs in RMS
- How to configure RMS

- Logging in to RMS
- The system options table

Organizational Hierarchy

- Describe the organizational hierarchy in RMS
- Identify tables involved in the organizational hierarchy and understand the relationship between each table
- Identify online forms involved in the organizational hierarchy
- Explain the relationship between each form and its base table involved in the organizational hierarchy
- Identify batch programs involved in the organizational hierarchy
- Explain the relationship between each batch program and its driving table or file involved

Merchandise Hierarchy

- Describe the merchandise hierarchy of RMS
- Identify tables involved in the merchandise hierarchy and the relationship between each table
- Identify online forms involved in the merchandise hierarchy
- Explain the relationship between each form and its base table involved in the merchandise hierarchy
- Identify batch programs involved in the merchandise hierarchy
- Explain the relationship between each batch program and its driving table or file involved in the merchandise hierarchy

Supplier and Supplier Sites

- Describe setting up suppliers in RMS
- Identify tables involved in supplier maintenance and explain the relationship between each table
- Identify online forms involved in supplier maintenance
- Explain the relationship between each form and its base table involved in supplier maintenance
- Identify batch programs involved in supplier-related processes, and the relationship between each batch program and its driving table or file involved in supplier-related processes
- Explain supplier sites

Item Maintenance

- Describe item maintenance in RMS
- Identify and explain the item online processes, batch processes, and data flows
- Identify the high-level integration points associated with items

Pack Item Maintenance

- Describe pack item maintenance in RMS
- Identify and explain the pack item online processes

Cost Maintenance

- Describe cost maintenance in RMS
- Identify and explain the cost maintenance online processes and batch processes
- Identify high-level integration points, key tables, online forms, and batch programs involved in cost maintenance-related processes

Purchase Order

- Describe purchase order maintenance in RMS
- Identify and explain the purchase order maintenance online processes
- Name key tables associated with purchase order maintenance
