

## **DAY ONE & TWO**

### **PgMP Application**

#### **Introduction**

#### **Program management performance domains**

#### **Program strategy alignment**

#### **Program Benefits management**

## **DAY THREE & FOUR**

#### **Program stakeholder engagement**

#### **Program Governance**

#### **Program Life Cycle Management**

#### **Program management supporting processes**

#### **Flash Performance Domains/Knowledge Areas (supporting processes)**

This is a new concept where the participants work in teams to determine the key object types including processes, scenarios, triggers, tools and techniques within each area and then presenting the findings to the group.

## **DAY FIVE**

### **Overview and Case Study**

The overview and case study day allows the participants to review the topics that have been taught during the training, as well as to enact out a program from strategic selection, planning, execution and closure. The participants work in teams during the day and follow a structure that models the types of decisions and hence questions related to the PgMP exam. During the case study the teams will produce key program document deliverables (artifacts) and manage the types of internal and external influences on a program. The case study builds on the knowledge gained from the first four days of the course.
