

# Setting up F5 Advanced WAF

## Chapter 1: Setting Up the BIG-IP System

- 🔗 Introducing the BIG-IP System
- 🔗 Initially Setting Up the BIG-IP System
- 🔗 Archiving the BIG-IP System Configuration
- 🔗 Leveraging F5 Support Resources and Tools

## Chapter 2: Threat Overview and Guided Configuration

- 🔗 Today's Threat Landscape
- 🔗 Differentiating Benign and Malicious Clients
- 🔗 Categorizing Attack Techniques
- 🔗 Defining the Layer 7 Web Application Firewall
- 🔗 Defining Traffic Processing Objects
- 🔗 Introducing F5 Advanced WAF
- 🔗 Using Guided Configuration for Web Application Security

## Chapter 3: Exploring HTTP Traffic

- 🔗 Exploring Web Application HTTP Request Processing
- 🔗 Overview of Application-Side Vulnerabilities
- 🔗 Defining Attack Signatures
- 🔗 Defining Violations

## Chapter 4: Securing HTTP Traffic

- 🔗 Defining Learning
- 🔗 Defining Attack Signature Staging
- 🔗 Defining Attack Signature Enforcement

## Chapter 5: Mitigating Credentials Stuffing

- 🔗 Defining Credentials Stuffing Attacks
- 🔗 Credential Stuffing Mitigation Workflow

## Chapter 6: Form Encryption Using BIG-IP DataSafe

- 🔗 What Elements of Application Delivery are Targeted?
- 🔗 Exploiting the Document Object Model
- 🔗 Protecting Applications Using DataSafe
- 🔗 Configuring a DataSafe Profile

## Chapter 7: Deploying Threat Campaigns

- 🔗 Defining Threat Campaigns
- 🔗 Live Update for Threat Campaigns

## Chapter 8: Using L7 Behavioral Analysis to Mitigate DoS

- ❏ Defining Behavioral Denial of Service Mitigation
- ❏ Defining the DoS Protection Profile
